## Rheinmetall wins second contract for regenerating more parts of the Bundeswehr's modular medical facilities

At the end of January 2023, Germany's Federal Office for Bundeswehr Equipment, Information Technology and In-Service Support (BAAINBw) selected Rheinmetall to remodel additional parts of its modular medical facilities. The special modular medical facility containers ordered here by the Bundeswehr will be used, for example, as food safety laboratories. The order is worth a figure in the higher-single-digit million-euro range. Work is to be complete by December 2023.

Known by their German initials as MSE containers, they constitute a family of modular medical facilities. Fabricated since the 1990s, multiple variants of these units have been procured and are now undergoing comprehensive regeneration.

The MSEs consist of rescue facilities and field hospitals used in Bundeswehr areas of operation. Here, individual systems perform specialized tasks, serving in this case as a food safety laboratory, or LCM. The technical and medical equipment in the LCM help to assure food safety in the field during deployed operations. These stackable container systems are CSC-classified, meaning that they can be transported on container ships. The systems and their equipment are customized in terms of scope and functionality.

Dr Deniz Akitürk, managing director of Rheinmetall Project Solutions GmbH, is particularly proud of the latest project: "This is the second time that we've won a contract of this kind. Rheinmetall Project Solutions GmbH can look now forward to more orders in this segment."

Responsible for mobile deployable mission solutions, Rheinmetall Project Solutions GmbH has bundled the Group's resources and capabilities for mission support ever since 2019. It provides customers with long-term mission support through specific services. Rheinmetall AG created the company specifically to handle services and projects for mission support.

### ► Key facts

- Germany's Federal Office of Bundeswehr Equipment, Information Technology and In-Service Support has contracted with Rheinmetall for the conversion of modular medical equipment
- Contract is worth a figure in the higher single-digit million-euro range and will be completed by December 2023
- Rheinmetall Project Solutions GmbH takes over project responsibility
