Owners of new BMW R nineT models equipped with Euro 5 sometimes complain that they have lost the proven on-board socket compared to their predecessors. Room for a USB socket urgently needed to be created.

This means that neither navigation systems nor other terminal devices with a motorcycle connection cable (DIN plug) can be charged or supplied with the usual power. Unfortunately, convenient charging of the motorcycle battery with a Can-Bus-compatible charger via the on-board socket is also a thing of the past. Not quite. For those who do not want to have this plug removed, we recommend the Wunderlich on-board socket. The operation of devices with DIN plugs is still possible.

The specialists for BMW motorcycle accessories have placed the on-board socket close to the steering head, in the front left below the tank, allowing for easy access and always within reach. Enabled is ideal storage for various items stored in the tank bag, omitting the need for long cables. A mounting bracket, included in the installation kit, serves as a solid base for discreetly attaching the on-board socket.

The electrical connection of the on-board socket made using the cable set is also included and is pre-assembled, specifically for the R nine T. This connects the vehicle’s wiring harness to the on-board socket via standard BMW plug & play connections.

**AT A GLANCE:**

**Item-No.:**

42040-900 - Wunderlich on-board socket - black - for BMW R nineT models (Euro 5)

**The facts:**

**Function**
