Rheinmetall awarded fifth order for Germany's Modular Medical Facilities total system

Germany's Federal Agency for Bundeswehr Equipment, Information Technology and In-Service Support (BAAINBw) has contracted with Rheinmetall to modernize additional parts of the Bundeswehr's Modular Medical Facilities total system (MSE). For Rheinmetall, the aggregate value of the contract is in the mid-single-digit million-euro range.

The order encompasses X-ray containers that enable X-ray imaging of the entire human body sitting, lying or standing, as well as internal organs in the radiology realm. The X-ray equipment now in service no longer reflects the latest state of the art and must therefore be replaced or regenerated. The

regenerated and/or newly fabricated containers will house new Siemens X-ray equipment (scanner and diagnostic station), including accessories for subsequent operation in the container. Following integration, reliable patient care in accordance with current German standards will be assured without limitation in a field hospital consisting of multiple MSE containers.

The Modular Medical Facilities total system comprises military treatment facilities, trauma centres and combat support hospitals utilized in Bundeswehr areas of operation. Here, individual systems take care of special tasks – in this case, X-ray imaging. Care provided inside the container must correspond to current German hospital standards. Like all MSE components, the X-ray container is classified in accordance with the International Convention for Safe Containers. Moreover, because it is stackable, it can be transported by container ship. The systems and equipment they contain are adaptable in terms of scope and functionality depending on customer specifications.

“We’re delighted to have been awarded a fifth contract for the MSE total system and expect to see continued growth in this area in future”, declares Dr Deniz Akitürk, CEO of Rheinmetall Project Solutions GmbH. Since 2019, Rheinmetall Project Solutions GmbH has bundled the Group’s resources and capabilities in the operational support domain and is thus responsible for mobile deployed operations solutions. By supplying special services, it seeks to provide customers with long-term operational support. Rheinmetall AG created the company specifically to handle services and projects relating to support of deployed operations.

► Key facts

- ▷ Rheinmetall books fifth order for Bundeswehr's Modular Medical Facilities (MSE) total system
- ▷ Order worth a figure in the mid-single-digit million-euro range
- ▷ X-ray container enables patient care in accordance with German hospital standards
- ▷ Additional MSE-related orders expected
