Rheinmetall at the DSEI 2015: HEL-lights in London

The Defence & Security Equipment International (DSEI) opens its gates to the international defence community in London every two years. Rheinmetall will once again be represented at the DSEI between 15th and 18th September 2015.

At its exhibition stand S7-110, the high technology group specialising in Security and Mobility will also showcase its leading role in the field of High Energy Laser (HEL) effectors. An Air Defence HEL effector capable of engaging low, slow, small (LSS) threats will be presented at a European Defence show for the very first time. The German defence contractor will also be showing an HEL effector for maritime applications for the first time.

Moreover, Rheinmetall will highlight its capabilities as a leading supplier of advanced soldier systems. A recent order from Canada is an impressive proof of the fact that the Düsseldorf-based group can offer solutions tailored specifically to the requirements of individual customers.

Another focus at the Defence & Security Exhibition will be the air burst capabilities of Rheinmetall, ranging from 40mm ammunition and AHEAD medium calibre technology to programmable DM11 tank ammunition.

The Rheinmetall display will include an unprotected HX77 with flatbed and an HX2 40M with Integrated Armour Cabin/IAC as members of the proven family of RMMV logistic vehicles. A field ambulance version of the innovative protected Survivor vehicle will likewise be showcased for the first time.
