

Press Release

Huber Kältemaschinenbau AG opens new subsidiary in France

Illkirch-Graffenstaden, 04.01.2021

The Peter Huber Kältemaschinenbau AG continues its international expansion. In early November 2020, Huber opened a new support and service center based in Illkirch-Graffenstaden, France. The new subsidiary will serve end users and partners in France under the name "Huber France Services".

Located in a modern industrial park near Straßbourg, Huber France Services corporate building includes office and workshop area for repairs, as well as service and storage rooms. Sebastian Geiger, CEO of Huber France Services SASU, is looking forward to the challenges ahead: "We are looking forward to exciting projects with our customers and a good cooperation with our long-term partners in France."

In the past, Sebastian Geiger has been responsible for pre- and post-sale technical support at the HQ of Huber in Germany, including continuous improvement of processes, fault diagnostics, technical training for users and service technicians. In his new role as a CEO, Sebastian Geiger will share his huge experience and special knowledge in refrigeration, thermodynamics, mechanics and electronics to customers and distributors in France.

Furthermore, our long-standing French sales team under the direction of Philippe Muraro and Dr. Olivier Jarreton will continue to be the first consultants for our customers for high-precision temperature control technology.

Due to the current situation, an official inauguration ceremony with guests and the management was not held. Daniel Huber, Chairman, sent his greetings from the headquarters in Germany: "We look forward to serving our French customers even better in the future. For this, Sebastian Geiger has put together a competent and experienced team for consulting, sales and service." In cooperation with long-term business and service partners, the temperature control technology specialist guarantees nationwide customer service in France and wide parts of the Maghreb states.
