

Eibach presents innovative product lineup at Automechanika 2022

Automechanika will be held in Frankfurt am Main from September 13 to 17, 2022. Eibach will be presenting its latest developments in Hall 4 at the leading trade fair for aftermarket automotive parts and accessories.

Automechanika is the international meeting place for the industry, dealership trade and maintenance and repair segment. For Eibach, the leading manufacturer of high-quality suspension and chassis systems, the trade fair is the ideal platform to spotlight its Eibach Replacement Line (ERL), Heavy Duty Suspension, Pro-Kit and Sportline product lines.

ERL | EIBACH REPLACEMENT LINE

The Eibach Replacement Line (ERL) meets the increasing demand for replacement springs. For this series of products, the family-owned company from the Sauerland region has applied its accumulated know-how from original equipment, tuning and motorsport to develop an attractive range of replacement springs. The range includes around 1,200 standard replacement springs of the high quality that Eibach is known for, at a lower aftermarket price.

Eibach therefore provides an important contribution to the reliable supply of spare parts, as even standard suspension springs have become expendable parts in recent years.

This is due to an ongoing effort to reduce the weight of all components in the automotive industry. As a result, chassis springs are becoming lighter and lighter, which increases the risk of spring fracture. Every year, hundreds of thousands of standard springs have to be replaced due to spring fracture.

With the new, state-of-the-art Wiethfeld logistics center situated between Finnentrop and Attendorn, Eibach serves this prospering market and further expands the unique selling point of the Eibach Replacement Line, "Development, Production and Logistics in Germany."

HEAVY DUTY SUSPENSION & ARMoured VEHICLES

With Heavy Duty Suspension, Eibach addresses those customers who are looking for unique solutions for special applications. Examples include: special vehicles for all types of demanding operations such as ambulances, armored and light tactical vehicles, as well as support and patrol vehicles.

Each vehicle presents a unique challenge to the integrity of the suspension system. Eibach developments ensure that these vehicles can be safely controlled in an emergency, even with heavy weights and poor road surfaces.

PRO-KIT | PERFORMANCE SPRINGS

The Eibach Pro-Kit is the perfect solution for series production vehicles. The proven spring system lowers the vehicle's center of gravity and reduces bounce when accelerating, reduces body roll when cornering and dips when braking.

The Eibach Pro-Kit, in combination with suitable wheels and tires, guarantees success for optimum performance. In addition, the lowered centre of gravity reduces the distance between the tires and the wheel arch and gives the vehicle a sporty look.

SPORTLINE | SPORT PERFORMANCE SPRINGS

With the Sport Performance Springs, Eibach goes one step further. The extreme-performance spring set, which has been specially tuned for motorsport enthusiasts, achieves legendary handling by aggressively lowering your car's centre of gravity, using our precision-engineered progressive spring rates.

About Eibach

Eibach enjoys a worldwide reputation as a leading manufacturer of high-performance suspension springs, components and systems as well as hi-tech industrial springs – especially for demanding applications.

Founded in Germany in 1951, Heinrich Eibach laid the foundation for the Eibach Group, which is now active around the world. After Heinrich passed away in 1967, his son Wilfried took charge and grew the company to its current market-leading position.

The future of the Eibach Group as a family-owned company is secured by the commitment and cooperation of the third generation, management and the family foundation.

Eibach has production plants in Europe (Finnentrop, Germany), North America (Corona, CA, USA) and Asia (Shanghai, China) as well as engineering and sales in Australia, England and South Africa.

In addition, we service customers in more than 80 countries around the world through our regional partners (or distributors).

Eibach enjoys a worldwide reputation as a leading manufacturer of high-performance suspension springs, components and systems as well as hi-tech industrial springs – especially for demanding applications. The range of applications is very comprehensive: it covers almost all areas of high-quality industrial and automotive applications.
